Introduction

A project will be developed in which we must create a company with a fantasy name and logo, which must develop a computer system that contributes to simplify the logistical and/or administrative management of a company that produces, packages, sells, and distributes food.

The objective is to create a computer system that contributes to streamlining the logistical and/or administrative management of a company involved in the production, packaging, selling, and distribution of food products. To achieve this, a user-friendly website will be created to serve as an interface for users, connected to a database to obtain user data, and ultimately make easier order delivery to the customer's branch.

Project development

Team members

- Leandro Diaz as Coordinator, as he is the oldest in the group and has already retaken subjects, Leandro has more experience as a leader. He chose to prioritize the subject of Programming because he was interested in it.
- Andrei as Sub Coordinator, was elected by vote, mainly for his responsibility and commitment to completing activities. He chose "Operating Systems" as he finds it easy.
- Mateo Martinez was chosen to maintain order and keep the team focused on the work. He chose "Web design" because he wants to improve in the subject.
- Brandon Alencastro showed more commitment than we expected. He chose "Formación empresarial" because he likes the subject .
- Ezequiel Afonso, to make everything as formal as possible and chose PHP to learn something new.

The main subjects were distributed in order of expected responsibility, from the lowest (Ezequiel) to the highest (Leandro) to be fairer to those who find it more challenging to work.

Main tasks:

The main tasks were to create the DER in programming.

Develop the HTML and CSS web design script.

Ensure proper formatting and organization of information in Word.

In PHP ,validating the data from the form so that they are saved in the database. that contains your validation methods so that each field is verified to meet your requirements.

In sociology, the most important were the theoretical bases of diabetes and the survey techniques. Finding the isotype of the company in business formation was also very important.
